It often takes more than a healthy lifestyle to give your body the shape you want.

UltraShape® has developed a totally non-invasive body contouring treatment that effectively and safely reduces unsightly fat deposits in men and women. UltraShape is clinically proven to reduce fat thickness and body circumference.

Before you resort to radical solutions such as surgery (liposuction, tummy tuck etc.), injections, incisions and other invasive techniques - consult with an [UltraShape physician](#) today and see if UltraShape is right for you! Get results with no discomfort, no downtime, no anesthesia and no

risk of harmful side effects.

No need for follow-up treatments - results are long lasting.

A new body contour in three treatments!

Designed as a practice based 'walk-in, walk out' solution, UltraShape requires no downtime, no follow up maintenance, and no recuperation period. The safe and effective procedure - ranging between 45 to 60 minutes can treat multiple areas like the abdomen, flanks and thighs. Following treatment, patients can immediately resume their daily routines. [Clinical results](#) show an average reduction of four centimeters and as much as ten centimeters after 3 treatments

The UltraShape solution, developed by plastic surgeons and scientists for the medical community, is based on a technological breakthrough that uses ultrasound waves, to selectively break down fat cells without affecting neighboring structures. After treatment, the body's natural pathways [clear away the disrupted fat cells](#) .

The procedure requires no anesthesia or sedation; Equally important, the safety and effectiveness of the UltraShape solution are endorsed by extensive [clinical trials](#)

Prof. Jana Hercogová wrote:

"Liposuction is the most commonly used technique for fat reduction; however, it is associated with severe risks such as embolism, nerve compression, skin necrosis, problems with anaesthesia, infection, visceral perforations and

seroma. 1–3 Furthermore, liposuction success is highly dependent on the skills and experience of the surgeon, therefore results can vary considerably. Hence, there is need for a safer, non-invasive technology to achieve fat reduction and improve the body silhouette.

UltraShape is non-invasive focused ultrasound technology that allows dermatologists to safely achieve fat reduction without the need for invasive surgery. Unlike liposuction, UltraShape utilises the natural physiological and metabolic pathways to clear fat. "
